Project Phoenix – Development History

Project Phoenix was officially **initiated on 2018-02-15** after the board approved the modernization strategy.

During **June 2018**, the initial feasibility study was conducted to evaluate technical and financial constraints.

On **2019-01-10**, the development team was formed, consisting of engineers, designers, and analysts from multiple departments.

The **first prototype was completed on 2019-09-25**, which demonstrated the core functionality of the system.

Between **March 2020 and August 2020**, the project faced significant delays due to global operational disruptions.

Development resumed on **2021-01-05**, focusing on performance optimization and security improvements.

The **beta version was released on 2021-07-20**, allowing selected users to provide feedback.

After multiple revisions, the **final production release occurred on 2022-03-30**.

On **2023-06-01**, Project Phoenix entered the maintenance phase, where updates and patches were regularly deployed.

As of **2024-12-31**, the project continues to operate successfully and supports thousands of active users worldwide.
